

ATTN: CO₂ Laser Users!

Would you put used motor oil in your car?

Of course not. Used motor oil would affect your car's life and performance. A refurbished lens in your laser system does the same thing. Why?

- ***A refurbished lens has already broken down once.***
- ***Critical OEM specifications are not maintained, during the refurbishing process increasing the risk of failure.***

A catastrophic lens failure can seriously damage your laser system and cost you thousands. **Are you willing to take that risk?**

OEM approved optics
Manufactured by

Centricut optics are guaranteed new, never refurbished!

To find out more about the dangers of using a refurbished lens in your laser system, or to learn more about the full line of Centricut optics and consumables, call 800-752-7623.
